

Title: .Net Developer

Description: The controls & administration platforms being deployed across our new Windows Active Directory environment is the only Workflow and Identity Management suite written entirely with Microsoft .NET technologies, including: Windows Workflow Foundation, Windows Presentation Foundation, Windows Communication Foundation, Microsoft PowerShell, and the Windows Identity Foundation. We need motivated, and experienced .NET Developers to participate in this challenging and exciting work.

Responsibilities:

- Develop and enhance test automation frameworks and tools
- Lead test efforts, and explore new test automation tools and methods
- Own the investigation, reporting and tracking of defects for middle tier and back end components
- Create test plans, set up test environments, develop automated tests, execute and maintain automated test suites, and analyze testing results
- Work closely with Developers and Program Management as part of one or more feature teams

Qualification:

- BS or MS in Computer Science
- Strong C# experience
- Microsoft PowerShell
- Windows Workflow Foundation, Windows Communication Foundation, Windows Identity Foundation, Microsoft SQL Server
- Ability to problem solve
- Large organization experience
- Strong Interpersonal and team-member soft skills
- Ability to work independently and multitask
- Must be a self-starter and results-oriented
- Excellent oral and written communication skills
